Paul Berrey

Paul Berrey
Field Director

Operating out of our Atlanta office, Paul is a field director with Competent Staffing Resource. He recently retired from Nortel Networks where he spent six years in professional services sales to BellSouth. His responsibilities there included selling professional services related to central office conversions and activities within the CO environment. This involved standardizing a conversion team to assist BellSouth with lines, trunks, PBX testing, and SLC integration.

Paul's extensive background covers a broad range of expertise covering translations assistance, NPA conversions, CO equipment cleanup from contaminants, equipment removal and relocation, and analysis of CO equipment proficiency. He has experience in engineering (SAE) of DMS hardware and software and served as project manager for a network-wide conversion for British Telecom that converted the company's system from numerous PBXs to one Centrex-based system. He spent two years with Nortel involved in installations, system testing, and converting Lucent 1As to DMS equipment, and upgrading processors.

Prior to his tenure with Nortel, Paul worked for BellSouth as a maintenance engineer with responsibility for DMS office maintenance, and as an equipment engineer responsible for switching office additions throughout Georgia. His career began with Western Electric where he worked on the Cross Bar, 1 ESS, 1A ESS, and 5ESS switching.
